Iunicipal Corporation of Greater N	Iumbai Headquarters (Bombay Municipal Corporation Building) 15
	in some parts.
11.0	DP Remarks/ Perceived Threats
	Municipal Office, Building forms part of C1 zone.
12.0	Additional Notes/ References/ Documents available
12.0	
	Additional Notes: Soon after Chhatrapati Shivaji Terminus was completed in 1888 work began on new office for the Municipal Authority to celebrate its promotion to corporation status. The building is made 20 ft. taller than neighboring VT to ensure it was not overpowered b the adjacent structures. The extension wing of the Municipal Building added later on Mahapalika Marg is in harmon with the original building, at least in terms of materials, textures and scale. It was built in th 1950's or early 1960's. Both the buildings are interconnected by a passage at second floc level. Before the bay windows there used to stand a raised platform, to make speakers mor visible and audible.
	The tower rises to a height of 235 ft. <u>References:</u> INTACH (1990) Preliminary unedited listing of Unprotected Monuments, Buildings and Structures listed for Conservation. Pointed arched opening with grey and buff stone voussoirs, rose window, carvings in tympanum

Buff stone clad building with arched openings on round columns, balustrade

Round column with floral pattern corinthian capital

Carvings in the balustrade

Internal double height space with overlooking balconies supported on highly ornamented brackets

Series of continuous pointed arches with stained glass ventilators, glazed wooden shutters, balustrade, dentil moulding cornice band

External pointed arch on round columns with decorative capitals, round, geometric and floral pattern in spandrel, frieze band

Internal entrance grand lobby with overlooking arched verandah openings surmounted with a dome

Internal dome with intricate carvings on the lower surface and ribbed vault

Arched opening with rose window, floral pattern in frieze band, highly intricate floral and animal carving in the spandrel, animal motif at the springing point.

Imposing tower with dome with a pinnacle, turrets, brackets, bands, balustrade

Rectangular openings with decorative sill and lintel level in geometric pattern

Municipal Corporation of Greater Mumbai Headquarters (Bombay Municipal Corporation Building)

Corner projecting porch with pointed arched openings, corner pilasters with animal statues at the parapet level, decorative motifs, balustrade.

Compound wall with pillars with decorative capitals and iron railing

Figurative Sculpture above the entrance porch

Side wing with steep double layered sloping Mangalore tile roof, with corner turrets, recessed brackets

157

Detail of the frieze with floral and geometric pattern

Rose window detail stone and glass panel with polychromatic stone voussoirs, in the background of carved jaliwork and buff stone facade

Marble fountain in the rear courtyard

Pointed arch with decorative intrados, motifs in the spandrel and stained glass ventilator, lintel level motifs

Intricately carved wooden paneled double shutter with exposed hardware

Wooden partition with carved paneling

Grand open well stone staircase with carved railing in floral pattern

Tracery work with central rose window with stain glass panel in the arched ventilator with grey and buff stone voussoirs

Internal Door glazed paneled shutters with internal half door shutters

157

Wide corridor with arched openings, ceiling with wooden rafters and beams, minton tile flooring.

Marble plaque explaining the details of the building construction

Arched opening with recessed arch bands on round columns with intricately carved corinthian capitals with floral and animal motifs

Municipal Corporation of Greater Mumbai Headquarters (Bombay Municipal Corporation Building)

Entrance porch with ribbed vaulted corridor

Internal staircase cast iron railing

Marble plaque with the foundation details

Animal sculpture at the staircase base on newel post

Recessed pointed arched window with stained glass ventilator panel, jail work and balustrade, round motifs in spandrel, dentil band at lintel level

Detail of the intricately carvings of floral and animal motifs, dentil moulding, floral pattern frieze bands in the extrados

Stained glass window

Window with round ventilator, double arched window opening with glazed paneled shutter, balustrade, arch bands.

Cama and Albless Hospital for Women and Children	158
	on eastern corner.
	Central porch bay rises higher than rest of the buildings having steep sloping roof with dormer windows. The main façade is flanked by two towers at either ends of the building and a narrow terrace on south-west side at second floor level.
	Ground and first floors are not in use and the second floor under the sloping roof serves as the residence of Deputy Superintendent of the Hospital.
	Albless Hospital The building is located in the south corner of the plot having main entrance through a
	projecting porch with terrace on south-western side. It is 'T' shaped in plan. The building has access from south-west side through porch.
	Subsidiary entrance is from north-west leading into a verandah. Through the porch one enters a common lobby having the main staircase. In the left wing is
	waiting room and the right wing is the ward. Along north-west and south-east sides there are verandahs.
	There is a dispensary in west corner of the building, which is accessed from the verandah. Toilet block is located in the north corner of the building standing independently accessed from the building. The central area serves as common ward for patients.
	Building has a typical floor layout and wards on first floor with Matron's room and private ward.
	The central bay has steep sloping gable roof rising higher than side bays. New building for labour ward and operation theatres is constructed in modern materials on north-eastern side of the building, which is connected by a covered passage.
	Lady Doctors' Quarters The building is located in the west corner of plot.
	It is a wooden structure with sloping gable roof. Main access is from north-west side. One enters directly the staircase lobby, which connects all the floors. Each floor houses single residential unit.
	Building has wooden semi-covered balconies along south-east side. Old Nurses' and Stewards' Quarters
	The building is located on north-west side of plot. It is 'L' shaped in plan with typical floor layout. Main access to the building is from south-west and south-east.
	All floors house common and private wards. Toilet block, servants' quarters and cooking room are located in an independent block
	connected to main building by a covered passage on north side. Building has wide corridors along sides facing internal enclosed space on north-west and north-east. Servants' Quarters
	This building is located in north corner of the plot. The building has simple 'L' shaped plan. It is a low-rise wooden structure with number o rooms as servant's quarters having timber sloping roof and common toilets. Main access to the building is from a corridor along south-west and south-east sides.
	Mortuary This structure is located in north corner of the plot behind servants' quarters block. Main access is from south-eastern side. Structure is rectangular in plan with three ramps to access the structure.
	Features <u>1. Cama Hospital</u> The symmetrical front façade has a central entrance porch with double <i>Lancet</i> arch resting on a central circular column with Corinthian column capital in front and single pointed
	segmental arch on the sides. The corners have buttresses, quatrefoil parapet and flying gargoyles on corner. Front Facade is punctuated with equilateral arches on either side o porch; four arches with spandrel having tri-foil ventilator on ground level and four simila
	arches on first floor level with hood moulding and <i>Antic</i> . The arches have multi-foil rose windows and double rectangular windows within. Features like <i>grotesque</i> are prominently seen on front façade on the Corinthian column capitals and arch springing points. The central bay behind the porch rises above by a floor till second floor. It has three
	equilateral arches at first floor level and pyramidal roof with dormer windows with finials atop.
	There are turrets at the corner at second floor level with conical tops, shaft resting or decorative corbels. Both the ends of the building have projecting stone balconies with tiled hip projecting
	bracketed roof. Dentils, rose windows, brackets, cornice bands circular columns with Corinthian capitals
	are prominent features on facades. <u>2. Abless Hospital</u> <u>The building here</u> current in a facade with control projecting peaks and many rable and
	The building has symmetrical façade with central projecting porch and many gable ends with finial atop and spirelets and finials at sides. Porch has three equilateral arches resting on circular columns and Corinthian column
	capitals in front and pointed segmental arch on sides. The openings are predominantly equilateral arches. Side elevations have projecting stone
	bracketed balconies at the corner. There are deep covered verandahs along all the sides

		•
7.0		Construction
7.1	Plinth	Low and medium height plinth in grey stone with projecting plinth protection layer.
		Height of plinth varies from low to medium in each building
7.2	Walls	Thick load bearing stonewalls. Internal walls non-load bearing in places, or spaces defined
		by wooden partitions.
7.3	Floor	Timber floors with large wooden beams, wooden rafters and wooden floorboards.
		In some places wooden rafters are replaced by steel sections.
		Buildings added later have RCC floors.
7.4	Stairs	Main open well stone staircases with cast iron railing and wooden handrail.
		Number of small staircases in cast iron spiral, timber doglegged, RCC etc.
7.5	Openings	Most of the window openings are arched openings with rectangular double windows with
		multi-foil traceries.
		Rectangular openings with wooden framed glazed paneled double shutters.
		Corridors have stone arched openings; wooden verandahs with intricate wood paneling
		projecting stone bracketed balconies.
7.6	Deefer	Door louvered or paneled shutters, with fixed paneled ventilators.
1.0	Roofing	Cama Hospital buildings have arch braced timber truss hip and gable roofing with Mangalore roofing tiles.
7.7	Articulation	Corinthian column capitals, decorative arch springing points, equilateral arches, stone
1.1	Anodation	bracketed projecting balconies, wooden corridors with carvings.
7.8	Finishes	External facades of main structures are exposed stone ashlar masonry. Walls are mostly
		plastered and painted from inside.
		Newly constructed structures have plastered and painted walls.
7.9	Interiors (Movable & Immovable)	Movable
		Old beds, benches, tables, chairs, huge cupboards, racks, shelves etc.
		Immovable
		Statue of Lady Reay in a hall in Albless hospital building.
		Marble plaques displaying history of the Hospital.
		Wooden partitions with decorative carvings.
7.10	Compound/ Fence/ Gate	Front side along main access road is a stone masonry wall about 2 ft. high with fencing
		above. Stone pillars on either side mark entry gates.
		Hoop Iron fencing along the periphery on all sides.
7.11	Curtilage/ Unbuilt space/ Out Buildings/	Covered paved passages inter-connecting various buildings.
	Landscape	Oxygen Park with various species of trees.
		Watchman's cabins at access points.
		Waste disposal plant on north side of plot near the Mortuary.
		Water storage tanks near most of the buildings. Underground water storage tanks an
		Pump house on east side of plot.
		Canteen, generator room, servants' quarters, common toilet blocks spread over entire plot.
8.0		Services & Utilities
8.1	Lighting	Natural daylight through verandahs and skylights together with electrical lighting fixture
0.1	-igning	suspended from high ceiling.
8.2	Ventilation	Verandahs act as wind catchers allowing natural ventilation through traceries and openings
0.2	Vonuduon	Dormer windows supplement the ventilation process.
		Electrical fans have been suspended from the high ceiling and few rooms are provided with
		forced ventilation like Air- conditioners.
8.3	Electricity	
8.3 8.4	Electricity Water Supply	BEST MCGM

Cama and	Albless Hospital for Women and Children	158
8.6	Fire Precaution	Provision of equipments like, hosepipes and hose taps installed on each floor.
8.7	Other (HVAC/BMS/Security Systems)	Security guards posted.
9.0		Condition
9.1	Plinth	Fair – The Plinth of some buildings is almost negligible due to alterations.
3.1		The plinth of other buildings is in bad state with organic growth, seepage, chipping.
9.2	Walls	Poor - Some places there are leakages observed. Internal partitions have been added.
9.3	Floor	Fair - At some places the wooden members of the flooring are in a deteriorating state. Steel
0.0		sections replace some.
		Steel sections have been added for additional support.
9.4	Stairs	Fair – Main staircase in Albless Hospital building is not in use therefore not maintained. The
		stair well is used as dumping yards for the hospital.
		Some places supports have been added.
9.5	Openings	Fair - The openings have been blocked to house AC's, shutters have been changed. Few
		door openings have been in filled with brick masonry.
		Verandah openings have been blocked in an insensitive manner.
		Many changes in the internal and external openings of main buildings have been planned.
9.6	Roofing	Fair - Few places skylight material has been replaced, chajjas have been added.
9.7	Articulation & Finishes	Fair - Few places features are in a broken condition. The stone façade of the main building
0.0	0	is insensitively repaired.
9.8	Services	Poor – Service pipes are broken in many places causing leakages and dampness in walls.
9.9	Out Duildingo	The manholes are not covered. In many areas leakages are resulting in unhygienic ponds. Fair – cleanliness not maintained.
9.9	Out Buildings Overall Conditions	Fair Maintenance level Poor
9.10		
10.0		Transformation
	Form	Numerous new structures have been added in the plot using modern material.
	Structure	Verandahs have been enclosed.
	Articulation & Finishes	-

St. Xaviers Colle	ege	160
		and passages overlooking the front landscaped area on the west side. Wooden staircases
		are located in the north and south end. The ground floor houses the 'Heras' Institute of Indology, library and office areas. The first
		floor houses the office areas and classrooms. The second floor has the residence rooms
		and private chapel area.
		Science Building:
		The Science building is a longitudinal building oriented in the east west direction. The
		building starts from the west corner and continues with a marginal curve, ending in the east
		corner, forming a common façade to all three quadrangles, and connecting the
		perpendicular buildings. The building has rooms lined up on the north side with verandahs and passages on the
		east side, overlooking the quadrangles. The Hall and the library building are connected
		between the first and second quadrangles with open well 'C' shaped double stone staircases
		from opposite sides with intricately stone carved railing and soffit.
		The ground floor houses classrooms with verandahs opening into the quadrangle. The first
		and second floor has the library, classrooms and laboratory rooms. The second floor has
		the residential rooms of the priests. A wooden doglegged staircase at the north corner
		connects upper floors.
		A bridge wing with passages of arched openings and stone round columns connects the Administrative and Science building.
		Multipurpose Hall and Reference library:
		The building is rectangular and is oriented in the north south direction with ground floor hall
		accessed from the colonnade and the upper floor from the north end.
		The building houses a multipurpose hall with double height, with a colonnade of arched
		openings and internal door shutters opening up into both sides of the quadrangles.
		The first floor houses the reference library. The classrooms on the second floor have
		doubly loaded corridor. A recessed third floor has been newly added with temporary shed, on the terrace floor.
		Chapel Building:
		The building is a rectangular low scale structure oriented in the east west direction. The
		building is connected with the Administrative building and Hall building through a bridge at
		the first floor level.
		The ground floor has an arched colonnade and the first floor houses the chapel. The chapel
		entrance is from the west side from the first level through a lobby formed below a projecting
		balcony, supported on stone arch opening and columns. The apse is located on the east side.
		Features
		Administrative building:
		The building is clad with grey stone ashlar masonry. The entrance to the building is through
		a porch with surbased side arches and three semicircular arches from the front, supported
		on columns with intricately carved stone capital friezes. The stone frieze is in a floral
		pattern. The terrace above the porch has stone carved trefoil tracery work within the round pattern of the balustrade.
		The central wing has sloping Manglore tile gable roof supported on wooden members,
		ending into a finial. The side wings have sloping roof with a series of projecting eves,
		ending into a finial.
		The façade has pointed, semicircular, trefoil arches and single span arch with two arches
		within, in two or three numbers with columns with decorative capitals in the center.
		The façade is adorned with floral and geometric pattern frieze bands, bands defining levels
		and corner quoins. Internally the openings are arched, supported on columns with decorative capitals. The
		chapel has some intricate wooden wall paneling.
		Science Building:
		The building is clad with grey stone ashlar masonry. The building has a sloping Mangalore
		tile roof with side gable, ending in a finial.
		The façade has a semicircular arched colonnade, pointed arches, and geometric type of
		arched opening. The passages of the first floor have stone carved balustrade. The building has floor level bands and top floor has a cornice band.
		The staircase wing at the junction of Science building and the Hall is taller and is
		ornamental with spires in four corners and gothic arches.
		Multipurpose Hall and Reference library:
		The building is clad with buff stone ashlar masonry. The Hall on the ground floor has a
		pointed arched colonnade on the east and west side.
		The Hall has large arched openings with wooden paneled shutters, opening into the
		colonnade overlooking the quadrangle. The hall has a double height with balcony overlooking the lower level with the stage at a
		higher level on the south end with green rooms below. The balcony has wooden flooring,
		railing, paneling, a row of old photo frames, a row of ornamented wooden spires, wooden
		coffered ceiling. The openings also include ornamented rose windows.
		The reference library on the first level is highly ornamental with decorative coffered ceiling.

St. Xaviers	College	160
		The entrance to the library is ornamented with gothic features. The floor area has wooden partitions. Much old wooden furniture is still being used. Chapel Building:
		The chapel is clad with grey ashlar stone masonry. The building façade has horizontal bands and vertical decorative projections on the north side, which extend into spires. The north façade has an arched colonnade with its central wing higher than the rest of the wings. The central wing has an extended porch with spires and battlement parapets on the top and is higher than the side wings.
		The first floor chapel openings are large pointed arched opening with double arches and round opening within. The side wings on top end with stone battlement parapet. The entrance to the chapel is from west side through three arched opening into a lobby with a balcony supported on large arch and column above. The balcony railing is intricately carved in stone.
		The side openings are large arched openings with pointed arches, with double arches and quatrefoil openings within. The openings have stained glass shutters. The apse has chamfered walls with a series of arched window with stained glass shutters. The chapel ceiling is a highly ornamented groined vaulted roof, supported on a stone colonnette on square bases to form a colonnade along the nave. Style
		The building derives influences from Gothic Revival and Indo Saracenic style of Architecture.

5.1	Townscape (Manmade)	Prominent building located at the junction of Maharshi Karve Road and Veer Nariman Road
		The building is a city landmark on an important and busy junction, dominating the skyline of
		the Churchgate area. The building is juxtaposed between buildings of different styles and periods of Architecture,
		forming an important nature of the townscape of the city.
		The building overlooks Oval Maidan in front with, row of Art Deco buildings and
		Victorian Neo-Gothic buildings like University building, Secretariat building, High Court and
		on its either side.
		The structure stands on the site of an old gate within bastions of Fort and is thus integral to
5.2	Architectural Description	the history of Bombay. Planning
J.Z	Architectural Description	Indeterminable
		Features
		The building is constructed in grey basalt stone with a central dome rising above.
		The unique central tower has been designed to be square from the base up to 100 feet in
		height, then becoming an octagon that gradually diminished into a smaller octagon
		culminating in a circular masonry dome. Multiple smaller domes form the skyline with finial like features at the top.
		Window openings have semicircular and pointed arches in various sizes with ventilators
		above
		Narrow smaller acoupled arched openings with the arches supported on yellow stone
		circular column with corinthian capitals form one of the significant features of the facades.
		Continuous bands at each floor level, decorative bands, dentils, quatrefoil arched openings,
		lion carved in stone atop the gable ends, gable ends with large rose window are some of
		the integral features displayed on facades. The two porches on the western and southern facades provide additional strength and

		Western Railway Headquarters, building forms part of C1 zone
12.0		Additional Notes/ References/ Documents available Additional Notes: Frederick William Stevens designed the building on simple lines, with the total effect determined by the outline and massing. The building, with a length of 276 feet along the western façade and a central tower rising to 160 feet, has a facing of coursed blue basal stone with the domes, mouldings, capitals, columns, cornices and carved enrichments in

Vestern Railway Headquarters offices Building 16		
	Porbunder stone, white Kurla and Dhrangadhra red sandstone. Later, when these weathered badly, they were replaced with facsimiles in bronze, crafted by C Burns. The embellishments were prepared by Mr Gomez and students of the School of Art under the supervision of the Principal, Mr Greenwood. The contractors for the foundations were Gamajee Balajee and Company and those for the superstructure Jagooji Hanmantrao and Company. The coloured Maw's tiles, marble and coloured glasswork were executed by Sorabji Warden & Company while the contractors for the drainage and water supply and fittings were Richardson and Cruddas. The entire open ground both in front and behind the main building was laid out as a garden, separated from the road by ornamental railings and gates. The total cost of the building including drainage and water supply was exactly that estimated by Stevens – Rs 750,000. 		area of painting, on right is exhibition gallery for N	
		building there is the Maritime history section and Pre	
		floor both left and right wings have collections of E	
		behind staircase and Arms and Armour exhibit at	
		terraces on second floor.	
		Features	
		It is a symmetrical building, with ends and center l	being emphasized by projecting bays
		The central bay is huge equivalent to four regular ba	
		six bays with the end bays projecting out.	
1			
I		The end bays are emphasized by having onion sha	aped dome arising from lotus leaf and

Chhatrapa	ti Shivaji Vastu Sangrahalaya (Prin	
		having minarets on four corners of these domes at top; the parapet along the four minarets bear floral motif and openings with <i>jalis</i> . There are two small projecting terraces at the two corners of the end bay. Ground floor has Mughal arch openings while the first floor has a
		projecting balcony supported on decorative Gujarat style stone brackets and having a backdrop of two minarets with <i>jali</i> parapet supported on columns around the balcony's Mughal arch opening.
		The regular bays are separated by columns. On the ground floor a huge Mughal arch opening is present above which three trefoil Mughal arch vents are present with a cornice band to mark the floor differences. First floor has a composition of three Mughal arch
		windows with <i>jali</i> ventilators below and <i>chajjas</i> above supported on intricately carved decorative Gujarat style stone brackets, above which part terrace is formed in second floor front which has trefoil Mughal arch high parapet with columns ending in onion shaped dome arising from lotus petals pilasters.
		The central bay projects well ahead of end bays and having an entrance porch at the center which is formed of pendentive dome topped by <i>amlaka</i> and <i>kalash</i> , supported on Mughal arch openings and colonnette which is formed at the junction of two arches. Two intricately carved minarets mark the front of the porch. Central bay is further divided into three parts where the two flanking ones are identical and center bay is more ornate. The two side bays are slightly recessed from the central bay and are half the width of central bay. At the ground floor one sees small Mughal arch openings within rectangular buff stone frame; first floor has Rajput <i>jharokha</i> , second floor has <i>jalis</i> within Mughal arch openings above which
		Venetian dentil band is present and above which <i>chajjas</i> is supported on intricately carved decorative Gujarat style stone brackets. Above this a part terrace is formed in the third floor front side, which has high parapet with columns ending in onion shaped domes arising from lotus petals pilasters. The center portion at ground floor has a pendentive-domed porch, first floor has a series of three Mughal arch openings and second floor level and has a square base made of a series of Mughal arch openings over which the main central onion
		shaped dome arises from lotus petal. Surrounding the central dome there are series of minarets. The building uses different buff and blue basalt stone, Curla stone, limestone and gray stone. It has decorative column capitals inside and wooden galleries in central atrium. All
		the openings are largely Mughal arch openings but few at the rear are segmental arch openings. Style Ruiding represents influences of the Inde Screeping style
5.3	Intrinsic	Building represents influences of the Indo Saracenic style. The acquisition in 1915 of the collections of Sir Purshottam Mavji, the magnificent gift in 1921 by Sir Ratan Tata, and in 1933 by Sir Dorab Tata, of their valuable art collections, formed the nucleus of the museum's art section. The transfer of sculptures and coins of the defunct Poona Museum, of the collection of the Bombay Branch of Royal Asiatic society, consisting of valuable sculptures and epigraphs, and the co-operation between the board of trustees and the Bombay Natural History Society, helped in setting up the archaeological
		and Natural history sections. Currently it houses elite collection of sculptures from Gupta period, Mirpurkhas, Buddhist images, Aihole, Pauni, Pitalkhora, beside that varied collection from Indus Valley Civilization, best collection of paintings and illustrated manuscripts, Maritime heritage,
		Natural history has various habitat and species in display, vivid collection of decorative art in jade, wood, ivory, metal and other medium, fascinating panorama of the religious and artistic world of Nepal – Tibet, varied typology of Indian weaponry of which the main attraction is of Allauddin Khilji's <i>Khanda</i> and Akbar's cuirass with shield, has a major section on Far Eastern Art which has an iron snake of rare workmanship made by renowned Armour maker, Muni Yoshi, is today National Treasure of Japan, and exquisite

6.0		Topography
6.1	Floors	G + 2
7.0		Construction
7.1	Plinth	High gray stone plinth with buff basalt stone edging for plinth protection.
7.2	Walls	External wall is load bearing made of stone, buff and blue basalt stone and Curla stone ashlars masonry. Inside the walls are plastered and painted, some walls were paneled by wooden planks to avoid seepage.
7.3	Floor	In some areas timber flooring is observed, but largely, it is in RCC supported over beams and finished with tiling.
7.4	Stairs	Six staircases are present. Main staircase is made up of two L-shaped with common mid landing, secondary staircase is a C-shaped staircase with open well, has an elliptical staircase in annex building and

	ti Shivaji Vastu Sangrahalaya (Prince of Wa	
		spiral staircase for terrace.
		Primarily all staircases are made of stone with wooden handrail and baluster.
		The terrace spiral staircase is decorative in cast iron.
		On second floor wooden railing has lamppost placed at regular intervals.
7.5	Openings	All doors, windows and openings are Mughal arched openings but few are semicircula
		arched and rectangular openings.
		Many ventilators are present above and below of window and door, which are either don
		in <i>jali</i> work or glazed frame or mild steel grill.
		The windows are double, triple and fourth leaf with ventilators above and below the linter
		and sill respectively.
		All windows are glazed panels in wooden frame.
7.6	Roofing	The roof is a composition of domes, flat terraces, vaults, minarets and chatris. The dome
		covered with ceramic mosaic chips, pendentive vaulted arches support the domes an
		sloping roof above the side wings.
7.7	Articulation	All the features are in buff basalt stone especially carved stone brackets, jalis, Rajpu
		jharokas, onion shaped or bulbous dome arising from lotus petals seen in all minarets
		decorative cornice and corbels, floral motif and decorative column capital.
7.8	Finishes	External walls are in exposed stone ashlar masonry and many places have alternate bu
		and blue basalt masonry specifically observed in arches and certain areas in walls.
		Internal walls are plastered and painted.
		Flooring is varied from marble pattern flooring, wooden, china mosaic on terrace, kotah an
		ceramic tiles.
		Has false ceiling done in the entire exhibition and display area.
7.9	Interiors (Movable & Immovable)	Movable
1.9		
		Old furniture, panels, racks, display board, showcases, benches, artifacts, prehistor
		anthropological objects, weaponry, paintings, statuary, bronze gallery, ivory carvings, an
		all the other exhibits.
		Immovable
		Wooden columns and balusters, handrail, light fixtures.
7.10	Compound/ Fence/ Gate	The compound wall comprises of a stone wall over which a stone baluster and railing
		present over which cast iron grill work is present.
		Cast iron decorative entrance gate and side gates.
		Has carved stone gateposts.
7.11	Curtilage/ Unbuilt space/ Out Buildings/	Rear and side has open spaces.
	Landscape	Many outbuildings are present like two small sheds used as storage, fountain, pump roon
		entrance office, ticket counter, substation, guesthouse, residence building, Jehangir a
		gallery, Max Muller Bhavan, and chawl type houses.
		The site has a well-planned landscape layout with huge garden with a beautifully sculpte
		statue of King George V in naval uniform by George Wade fronting the museum. On the
		pedestal are bas-reliefs of the foundation stone laying ceremony and the reading of th
		address of welcome by members of the Municipal Corporation, weaponry, statues, fountai
		and carved stone relief work. Presence of many old trees which forms the main feature of
		the garden and site.

11.0		DP Remarks/ Perceived Threats
		Recreation ground, Museum and Art gallery, plot forms part of C1 zone
12.0		Additional Notes/ References/ Documents available
		Additional Notes:
		The seed of this museum were sown in 1892 resolution adopted by the government of India
		for promotion of trade and industries, but in 1894, Lord Harris had referred to this resolution
		in opening address at Bombay Fine Art Exhibition. The idea remained dormant till 1904
		meanwhile a representative committee was set up for the purpose. Its principal
		recommendation was to set up museum with an educational bias combined with a public
		reading room and a library. The 'Crescent Site' was recommended as an ideal site fo
		locating the Museum. The idea got impetus in 1905, when the people of Bombay decided
		to commemorate the visit of the Prince of Wales of England by setting up a Museum.
		During WWII the museum was threatened the safety of the museum exhibits, and thus the
		major collection had to be removed out of the museum and away of Bombay. Subsequently
		in 1946, the task of resetting the galleries was taken up.
		Designed by George Wittet in the Indo-Sarasenic style, the Museum is situated in a vas
		crescent-shaped compound with beautiful gardens. Yellow and blue basalt stone quarrier
		in the Bombay region has been extensively but sensitively used in the building. The Prince
		of Wales laid the foundation stone in 1905 during his first visit to the city and the building
		was completed in 1914. During World War I the Museum was used as a military hospita
		and was formally opened by Lady Lloyd, the Governor's wife, only in 1923. The dome
		bears a striking resemblance to that of the Gol Gumbuz at Bijapur. Elements of traditiona
		architecture have been blended extensively and aesthetically in the facade, including small
		bulbous cupolas on the towers, jalis used as infills for the Saracenic arches, Rajput style
		jharokas, brackets of Hindu temples and semi open veranda spaces incorporated in
		response to the climate. In short, the building is an assembly of elements from diverse
		sources. In 1936, an extension new wing designed by Gregson, Batley & King was added
		to house an amazing collection of exhibits of Natural History.
		The contents of the Museum form a crucial part of the city's cultural heritage. A large
		portion of the Art collection was a gift of Sir Ratan Tata, comprising paintings, Orienta
		arms, a unique collection of jade, china and porcelain, Indian silver and bronzes and othe
		objets d'art. Sir Dorab Tata also presented to the Museum a collection of paintings, statuar
		and a collection of Mughal miniatures and several Maratha relics. The Museum also house
		a fine collection of Rajput miniature paintings. A recent addition has been the collection of
		the legal luminary, Karl Khandalawala who was a Trustee of the Museum for several years
		In the gardens can be seen a variety of Oriental bronze sculptures. There is a beautifull
		sculpted statue of King George V in naval uniform by George Wade fronting the museum
		On the pedestal are bas-reliefs of the foundation stone laying ceremony and the reading of
		the address of welcome by members of the Municipal Corporation.

1.0		Denomination
1.1	Name of Premises	Elphinstone College
1.2	Earlier Name	Cowasjee Jehangir Readymoney building for Elphinstone College.
1.3	Built in:	1889 Extension Date: -
2.0	Maia	Access
2.1	Main	Mahatma Gandhi Road (not used) – vehicular and pedestrian
2.2	Subsidiary	David Sasson Library Marg - vehicular and pedestrian
3.0		Ownership pattern
3.1	Present	Government of Maharashtra (B. Sc. I.T. Department.)
3.2	Past	Government of Bombay.
3.3	Status	Owner
4.0		Use
4.1	Present	Degree College and Department of Archives.
4.2	Past	Government Central press and State records.
4.3	Usage	Daily.
5.0		Significance & Value Classification
5.1	Townscape (manmade)	Landmark building close to the historic Kala Ghoda square alongside important institutional buildings with a mandatory pedestrian arcade along the road front forming one of the most important avenues within the Fort area.
5.2	Architectural Description	Planning Rectangular building with a central open quadrangle around which continuous verandah passages provide access to all rooms arranged around it. Main entrance from the arcaded east side leads to a spacious entrance lobby leading to wide stone stair. Subsidiary staircases are also provided in the three corners except the northeast. East front also has narrow veranda bays on upper two floors above the pedestrian arcade. Ground and west side of first floor is occupied by Department of Archives to serve as storage facilities. Rest of the first, second and upper floors are occupied by the college. Administrative areas and classrooms are located on first floor whereas library, teacher's room, cultural hall and laboratories are all located in the pitched roofed second floor. Grand spaces in the part third and fourth floor were planned to be Principal's residence but presently lie vacant. It is connected to an annex building to the west side through a bridge at second floor. Features Well-composed long symmetrical front façade with the high central portion topped by a steep pyramidal roof. Raised central and edge portions are marked by decorative stone spires at all the four corners. Pedimented central porch has the carved head of Sir Cowasjee Jehangir above the ornamentally treated front arch. Entire long façade is marked by alternate red and Porbunder stone arch openings, semicircular on ground arcade level and pointed arch on upper two floors. Central Arch openings are supported on finely carved capitals with floral and animal motifs. Finely carved stone relief cornice band at the second floor level. Projecting stone balconies with decorative brackets and stone relief parapet at both ends of the front façade. Highly omate iron railing in staircase parapet. Style The building displays Victorian Gothic style features.
5.4	Value Classification	A(arc), B(per), B (des), B (uu), E, F, I(sce) Recommended grade
6.0		Topography
6.1	Floors	G + 2 and part third and fourth floor.
7.0		Construction
7.1	Plinth	Low Plinth height about 0.3 m. dressed in Malad stone ashlar course.
7.2	Walls	Load bearing rubble stone masonry walls supported on steel girders, brick load bearing
L		walls on the third and fourth part floor.

Elphinston		165	
7.3	Floor	Shahabad stone slabs on wooden supports & heavy steel girders support large floor spans.	
7.4	Stairs	Overall four staircases. Central C- shaped stone stair supported on decorative brackets Two of the corner stairs are steel C- shaped with decorative railing and wooden handrail.	
7.5	Openings	Semis circular and pointed arch openings on the front and rear facades, also tracery within arch portions.	
7.6	Roofing	Sloping Mangalore tile roof on the three sides and steep pyramidal sloping roof supported on slender steel trusses. Central portion is also steep pyramidal roof.	
7.7	Articulation	High central bay with a projecting porch and stone spires at all the four corners and a semicircular projecting balcony with large ornamental corbel feature; intricately carved frieze band at the second floor level of the long façade; projecting balcony and supporting corbels, alternate buff and porbunder stone arches supported on richly carved capitals and circular columns. Stone parapet with trefoil and quatrefoil opening feature.	
7.8	Finishes	Buff basalt stone dressed external wall finishes and grey basalt stone in verandah walls and soft Porbunder stone for ornamental features. Brick faced arches in inner verandahs Plastered painted internal wall surfaces. Minton floor tiling in ground floor and wooder floorboard finishing on upper floors.	
7.9	Interiors (Movable & Immovable)	Movable Carved wooden furniture – benches and wall paneling have decorative value. Portraits of Dadabhai Nowroji present Immovable Original wooden partition panels and furniture some embellished with relief work.	
7.10	Compound/ Fence/ Gate	North and south sides have chain link fencing whereas the east front abuts the road and west side has ancillary structure forming compound boundary. Iron railing and gate, recently installed fences in the open front arcade but seems very incongruous to the open nature of arcade. Gate to the north side forms the main entry.	
7.11	Curtilage/ Unbuilt space/ Out Buildings/ Landscape	Paved quadrangle inside the building is the hub of college activities. Second floor bridge connects to the west side annex building in the Old Secretariat compound. Also a water tank and small pump room along with watchman's cabin in the north side open space.	
8.0		Services & Utilities	
8.1	Lighting	Adequate natural light also relying on artificial light.	
8.2	Ventilation	Adequate natural ventilation also relies on artificial means.	
8.3	Electricity	BEST

6.1 7.0		G+1 with a mezzanine floor, clock tower rise	

David Sas	oon Library and Reading Room	160
		Terrace slab is an RCC beam structure with IPS waterproof finishing. Vaulted floor over reading room in the verandah.
7.4	Stairs	Main open well staircase with stone risers and treads and cast iron balustrade with floral
		pattern and teakwood handrail. Narrow spiral staircase from the verandah to the terrace with risers, treads and railing in
		wood.
		A teakwood steep ladder leading from terrace to the clock tower.
7.5	Openings	Doors and Openings
		The main porch is a gothic pointed arch opening with trefoil and tracery work. The arch
		springs from Corinthian capitals. The arch is extended into a pediment with a pinnacle above.
		The grand main entrance wooden doors have single panel double shutters with a post box
		integrated in the shutter, loose stone stoppers. The ventilator of the door is an intricate
		tracery work of cast iron painted in black and gold.
		The administrative room doors have thick wooden frames of the wall thickness, with double
		paneled double leaf wooden shutters. Terrace doors are teakwood, flushed doors with an arched ventilator opening above.
		The reading room door openings are in the form of pointed arch, with radiating type stained
		glass fixed in the ventilators above. The double leaf double paneled wooden folding
		louvered shutter doors are fixed to a wooden frame.
		A row of arched openings in the verandah run through the entire width of the building. The
		spring from polished slender black column with Corinthian capitals.
		The internal arches in the verandah are joined to the array of smaller similar arched openings by the capital band.
		Windows
		Mid-landing consist of French windows with the height divided into two parts. The upper
		and lower part are wooden paneled double shutter, with the lower shutters protected with
		cast iron railing.
		The small independent reading room windows have long French windows, with the height divided into two parts. The outside upper and lower windows are wooden paneled double
		shutter. The upper inside shutters are double shutter hinged louvered shutters. The lower
		shutters are protected with cast iron railing.
		Windows at the main reading room entrance have wooden openable glazed shutters with
		grills inside.
		Windows along the longer sides of the reading room have full height arch shaped wooden long glazed openable sash window shutters with teakwood transoms on the outside and
		teakwood louvered shutters on the inside.
		Main reading room consists of ventilators above windows with radiating wooden members
		and coloured glass panels.
		Windows along the smaller sides of the reading room consist of long French windows with glazed openable shutters.
		Terrace consists of arch shaped wooden glazed openable sash window shutter with
		circular glazed fixed ventilator.
7.6	Roofing	Main staircase block has a unique wooden collar braced roof with teakwood planks and
		framing members.
		Pitched Mangalore tiled roof over administrative block.
		RCC slab and beam structure over main library hall. Verandah has wooden planks roof cladding over concrete slab in the center and vaulted
		concrete and steel section roofing over side sections.
		Clock room has Mangalore tile roof with wooden framework below.
7.7	Articulation	Coursed buff basalt stone cladding with alternate black and white stone bands along the
		arched openings forms the main feature of the building. Bands of alternate black and white
7.8	Finishes	limestone over arch openings Walls are finished with coarse buff basalt with thin mortar pointing externally, and plastered

5.1	Townscape (Manmade)	Landmark corner building facing the Kala Ghoda square at the intersection of Mahatma
		Gandhi road with university road.
		Accessed from the north side entrance through a high arcaded front, forms part of the
		continuous arcaded street front along with adjoining buildings in the Kala Ghoda precinct as per the urban design regulations laid by City improvement trust.
5.2	Architectural Description	Planning
0.2		The Building stands on a corner plot, with its east and north elevations facing the roads.
		The Internal layout included a provision for 130 rooms, a grand central atrium around which
		were placed the dining rooms and shops, and a colonnaded ground floor.
		The atrium once opened out onto a garden on the south – the present site of Army and
		Navy building. The present building accommodates numerous subdivision and accretions within and
		outside the main building.
		Features
		The building reflects strong structural grid in the external facades, exposing the vertical
		lines of the cast iron columns and the horizontal bands of the balustrades at each level.
		Decorative cast iron balusters and railings with monogrammed letters of Watson's hotel.
		The atrium at ground floor was once a fashionable lobby housing the banquet hall.
		Style
5.3	Intrinsic	Early Post Industrial Architecture The building witnessed the first screening of a motion film in India, Lumiere Brothers
5.5		cinematograph in 1896.
		First Cast Iron structure in India, with most of the structural members being manufactured in
		England and shipped into Bombay for assembly.

		Building forms part of C1 zone
12.0		Additional Notes/ References/ Documents available
		Additional Notes: The oldest building at the Kala Ghoda Circle, located at the corner site next to the Army & Navy Building, was once the grand Watson's Esplanade Hotel, erected between 1867-69 by John Watson, a wealthy city draper, who imported all the building materials from England. While still under construction, the building, with its unique cast iron frame imported from England, was described by one writer as a 'huge birdcage'. The spacious arcade at street level displays the original cast iron pillars. History was created here in 1896 when the foundations of the Indian Cinema industry – now the largest in the world – were laid with the screening of the Lumière Brothers' Cinematograph. 5.0		Significance & Value Classification
5.1	Townscape (Manmade)	Part of the arcaded street front, in the main building line of the Kala Ghoda area facing
		M.G. Road. The height and scale of the building coheres with the entire row of building on
		M.G. Road. A corner tower emphasizes the junction of the two streets.
5.2	Architectural Description	Planning
		A long building with the narrow front facing the road with the main staircase and lift block on
		the northern side of the building. The staircase area leads to a corridor with offices flanking
		the right side. Building has a subsidiary entry to the eastern end of the south façade, where
		residential quarters for some of the building workers can be found. Adjoining buildings abut
		the northern and eastern side of the building with a very narrow space between.
		Features
		It is a very ornate building with the façade divided in four bays. It has an arcade at the
		ground level and a cornice band marks all floors. All window openings are either
		rectangular, segmental or semicircular arched openings with architraves along the frame,
		dentil bands, intricately carved spandrels in floral patterns, ornately treated columns with
		festoon and floral motif. Balcony projections and pilasters can also be seen. A very ornate
		lift block in cast iron with wooden frame is both of which are carved intricately. Ground floor
		has an ornate marble handrail and balustrade. Decorative sill and lintels made of stone
1		projections can be seen on both sides of the elevation. Column like projections on the
		façade are very ornately treated. Projecting stone canopies at first and third floor level.
		Style
		It derives a strong influence from the Neo-Classical style of architecture.
5.3	Intrinsic	Presence of Ripon Club is one of the important characteristics of the building. The club is on the 3 rd and 4 th floors of the building.
5.4	Value Classification	A(arc), B (per), F Recommended II B

6.0		Tanagraphy
6.0		Topography
6.1	Floors	G + 4 with terrace.
7.0		Construction
7.0		Construction

	a Building	17 D'inth is af basely store of 0.0 mth bainty with an unreal surray of Darbardon store.
7.1	Plinth	Plinth is of basalt stone of 0.6 mt. height with an upper layer of Porbander stone.
7.2	Walls	Walls are constructed in stone masonry. At certain places in the front façade buff colore stone is exposed to enhance features of the elevation.
7.3	Floor	Floor is supported on wooden rafters resting on cast iron columns. Marble flooring is see
7.4	Stairs	in the entire building. Wooden staircase and decorative balusters form one of the important features of the
		building. The ground floor has an omate marble handrail and balustrade. The staircase doglegged staircase with narrow well.
7.5	Openings	Façade is punctuated with a series of windows on its front and south elevations. Most
		the windows are flat arched while some windows had semi-circular openings. Windows a largely double shutter and four shuttered. All doors and windows have a wooden framewo with ventilators above. Doors are heavy paneled and made in teak wood.
7.6	Roofing	A flat roof is present in the building. The latter half of the building has a low terrace wh the front part has an additional floor with the corner of the building being emphasized raising its height with respect to the front building line.
7.7	Articulation	Stone projections at sill and lintel level with emphasis on the keystones are one of the features repeated on the entire façade. Cornice band is seen at the terrace parapet level.
7.8	Finishes	The entire building has plaster (lime mortar) both inside and outside. At certain places of the front façade buff colored stone is exposed to enhance features of the elevation.
7.9	Interiors (Movable & Immovable)	Movable Many pieces of old furniture and a clock were seen in wood carved very intricately. Or could also see an old sofa, high desk and other furniture made in black wood. Chair tables and storage desk in Ripon Club are also of black wood and are very ornamental. Immovable Light and fan fixtures of wrought iron. Wooden handrail of the staircase is very ornate.
7.10	Compound/ Fence/ Gate	Building occupies the entire plot area so it does not have any compound/fence/gate.
7.11	Curtilage/ Unbuilt space/ Out Buildings/ Landscape	-
8.0		Services & Utilities
8.1	Lighting	Ample daylight is available through window openings supplemented by electric lights.
8.2	Ventilation	Ample ventilation through windows supplemented by suspended fans and A.C's.
8.3	Electricity	BEST
8.4	Water Supply	MCGM
8.5	Drainage (Plumbing & Sanitation)	MCGM
8.6	Fire Precaution	Presence of fire extinguishers in a few places but no advance fire fighting mechanis prevails.
8.7	Other (HVAC/BMS/Security Systems)	AC units.
9.0		Condition
9.1	Plinth	Fair - Plinth abutting the street has some stones damaged.
9.2	Walls	Fair - No visible damage to the wall is seen as the wall is plastered both inside and outsic though in certain places the plaster is peeling off. All the recent repairs of the building a carried out in brickwork.
9.3	Floor	Fair - At second floor, in lobby area new flooring is being done.
9.4	Stairs	Fair - Ventilation of the staircase block is inadequate, as the adjacent building is plac very nearby.
9.5	Openings	Poor – At many places windowpanes were broken, replaced and even entire windor pattern was changed. Many A.C. units have now destroyed the uniformity of the façade a are incongruously placed. At places one also sees the usage of grills that do not go with t character of the building.
9.6	Roofing	Fair – fairly maintained.
9.7	Articulation & Finishes	Fair - Plaster is peeling off from side façade at certain places. Hoarding and Advertisi boards disturb the façade of the building.
9.8	Services	Poor - Near the rear entry, where there are quarters for servants working in the building very poorly maintained, it has loose wires running around, haphazard placing of meter a terrible sanitation conditions.
9.9 9.10	Out Buildings Overall Conditions	- Fair Maintenance level Fair.
10.0		Transformation
	Form	-
	Structure Articulation & Finishes	At ground floor Travancore Bank is situated and they have constructed a mezzanine floor Addition of advertising hoardings covering articulation.

5.0		Significance & Value Classification
5.1	Townscape (Manmade)	The building stands on Mahatma Gandhi Road facing east.
		It has a central main access from an arcade at ground level.
		It has a massive rectangular front elevation with a central void forming a small terrace at
		first floor level, defined by tall tapering octagonal columns on either side spanning the
5.2	Architectural Description	height from the first floor to third floor. Planning
5.2	Architectural Description	It has a wedge shaped, roughly rectangular plan with central access from eastern side
		through an arcade.
		Different floors cater to the various departments of the bank.
		Parking, electric substation and AHU are located in the basement.
		Staircases and service areas are located on rear (western) side of the building.
		The building has symmetrical front (eastern) façade with an arcade on ground floor level. A
		central entrance bay defined by recessed, corbelled arches.
		Above is a high ceiling terrace at first floor level having two massive, three storey high
		circular columns resting on projecting cornices supported by two stone brackets.
		Central bay extends a floor higher.
		Features
		Corbelled pendant bracketed cornices above rectangular window opening at topmost floor
		level.
		Recessed, corbelled arches, at the central arched opening.
		Style
		It displays no specific style. Has influence of art deco, classical and vernacular styles of architecture.

5.1	Townscape (Manmade)	This significant building stands on a corner p	
		and Ash Lane facing west. Accessed central	
		massive rectangular symmetrical front elevat	
		tall tapering engaged columns on either sides	spanning full height from first to last floor.
5.2	Architectural Description	Planning	
		Large building roughly rectangular in plan with	h slightly inclined sides along the road fronts,
		accessed centrally through a high arcade into	a wide lobby and staircase.
		Office spaces are planned around all the three	
		side. Staircase, lift and lobbies are centrally lo	cated flanked by internal chowks for light and
		ventilation. Main toilets are placed along the	
		internal chowk. East side wing has a setback	at the fourth floor forming a terrace. Part sixth
		and seventh floor seem to be added later. A b	asement is provided serving as AC plant and
		service area.	
		Features	
		Building has an impressive scale and a sy	mmetrical western facade with a prominent
		raised central bay. The verticality of the b	uilding is emphasized by pilasters/engaged
		square columns and rectangular recessed	d window openings. The central bay is
		accentuated with bas-relief at top, which rises	
		the staircase block.	
		The south corner is curvilinear with a recesse	d entrance at ground floor. Splayed corner at
		the east side intersection. Flat arch opening	
		features depicting peasants and craftsmens.	
		Style	5 5 1 1 1 1 1
		Art Deco features observed.

5.0		Significance and value Classification
5.1	Townscape (Manmade)	Landmark building along M.G. Road with well composed symmetrical façade rich in
0.1		architectural detailing. Main customer access is from M.G. Road into the grand banking
		lobby whereas north and south entries are reserved for staff.
5.2	Architectural Description	Planning
		Rectangular plan with a projecting porch on the north side and curved corner at the
		south-east end is C-shaped from second floor upwards due to rear and central areas
		being ground and one. Ground floor serves as grand banking lobby with a mezzanine
		added later to accommodate more office spaces. Staff entrances from north and south
		side staircases lead to offices on upper floors. Floor layout seems complicated due to
		internal subdivisions for functional and security concerns. Services and toilet facilities
		are placed along the sides and rear. Front and two sides with narrow veranda like
		spaces presently accommodate cabin areas. A.C. plant is located at the rear east side.
		Features
		Symmetrical main façade with central tetrastyle central portico raised on rusticated high
		ground floor with triangular pediment bearing a flagpole at its apex above which a
		sculptural group represents Britannia, India, Australia and China. Also a pair of domed
		terrace features flanks both symmetrical sides. Carved figures in the triangular pediment
		and tympanum within the main entrance archways. Semicircular arches with distinct
		keystones on the external stone facades. Side façade is marked by colonnaded
		triangular pediment entrance. Intricately carved human heads adorn the keystone. Decorative capitals over circular iron columns within the high internal spaces. Neo
		Classical marble water fountain arranged centrally within a petal shaped pond in the center of large banking lobby at the ground floor.
		Style
		Influence of Neo Classical - Italian style.

5.1	Townscape (Natural/ Manmade)	Located on a prime site of Azad Maidan in South Mumbai.
		Main access is from Mahatma Gandhi Road on western side and secondary entrance is
		from Hazarimal Somani Marg on eastern side.
5.2	Architectural Description	Planning
		It's a linear building dividing Azad <i>Maidan</i> into two uneven parts.
		It has a wide and airy verandah offering a view of maidan. The ground floor houses the dressing rooms, a central hall, a billiards room, a bar, a lounge
		and administrative offices. On the first floor are the Committee Room, a central lounge, a ladies' cloakroom and a reading room with an adjunct that could be used as a stage.
		The entire first floor is constructed with movable partitions that could be used as a stage.
		space converted into a large concert hall or ballroom.
		Features
		The building is a typical Colonial building in the steel frame structure, timber floors, wide
		timber staircase, timber sloping roofs and Verandahs fronting the pavilion.
		Style
		Derives influence from Colonial and Vernacular styles of architecture.

12.0		Additional Notes/ References/ Documents available
		Additional Notes: Until the restructuring of the Fort area in the 1860s after the demolition of the ramparts, the foreshore beaches and <i>maidans</i> of the city, such as the Bombay Green and the Esplanade formed the core of Bombay's social and sporting life. The British had their Hunt and gymkhanas, swimming, yachting and racing clubs but had no formal club-houses. The historic meeting of members of the various clubs to formally establish the Bombay Gymkhana was held on 19 June 1875 concluding in the formation of Bombay Gymkhana. The total cost of construction of the building was Rs.18,625/ The new pavilion was completed in 1907 at a total cost of around Rs.88,000/-, was designed by Charles Fredrick Stevens as a steel frame structure. It has a wide and airy verandah, which offered a pleasing view of the <i>Maidan</i> . References: INTACH (1990) <i>Preliminary unedited listing of Unprotected Monuments, Buildings and</i> Structures

5.0		Significance & value Classification
5.1	Townscape (Manmade) Architectural Description	It is one of the many buildings on Shri Boman Kawasji Boman Behram Marg forming an important streetscape in the tourist-frequented areas of the city. The building stands on a corner plot at junction. The main entrance is from Shri Boman Kawasji Boman Behram Marg facing west. A subsidiary entrance is from Henry Path on southern side. Planning The building has a rectangular plan with shorter side along Shri Boman Kawasji Boman Behram Marg on west. Entrance of the building is from Henry Path, which leads to a common lobby and staircase area having access to individual flats on each floor. Each floor has two residential units with a typical floor plan. On one side are servant's quarters with toilet block in corner and the access to servant's quarters is through a spiral staircase. Features Oriel windows span first and second floor height on north and south façade resting on petal shaped corbel. Intricately carved spandrels, semicircular window openings can also be seen. Decorative bands are seen at impost level. Arch springing point is decorative in nature.
		The façade displays Neo-classical features.

Urban Design Research Institute

Churchill C		185(d)	
7.2	Walls	Load bearing brick walls plastered and painted externally as well as internally.	
7.3	Floor	Jack arch flooring with I section.	
7.4	Stairs	Two staircases are present. The main staircase is L-shaped with winders where as second is a spiral staircase. The main staircase is a wooden staircase with a wooden handrail and baluster while spiral staircase is of cast iron.	
7.5	Openings	All doors have rectangular opening. All windows are either semicircular or flat arch openings. The windows are double leaved with ventilators above and below the lintel and sil respectively. All windows are glazed paneled in wooden frames.	
7.6	Roofing	Partly terraced and part sloping roof supported on wooden framework with Mangalore tiling and eaves board.	
7.7	Articulation	Entrance with two pediments with decorative floral tympanum with cartouche, Corinthiar column capital, cinquefoil, scroll keystone, guilloche band, medallion, cornice band at al floor levels. Terrace parapet has onion dome top pilaster.	
7.8	Finishes	External walls are plastered and painted. Internal walls are plastered and painted. Flooring is varied.	
7.9	Interiors (Movable & Immovable)	Novable - Immovable	
7.10	Compound/ Fence/ Gate	- Big compound wall at rear and low compound wall in sides. Entrance gate is collapsible.	
-	Curtilage/ Unbuilt space/ Out Buildings/	Chain link fencing on other side. Open spaces at rear.	
7.11	Landscape	Landscape is done on J.A. Allana Road.	
8.0 8.1	Lighting	Services & Utilities Adequate natural light through door-window openings supplemented by electric light fixtures.	
8.2	Ventilation	Adequate natural ventilation through door-window openings supplemented by electric fans.	
8.3	Electricity	BEST	
8.4	Water Supply	MCGM	
8.5	Drainage (Plumbing & Sanitation)	MCGM	
8.6	Fire Precaution	No trace.	
8.7	Other (HVAC/BMS/Security Systems)	Window AC units.	
9.0		Condition	
9.1	Plinth	Poor - Seepage, drainage water seeping into plinth, dust accumulation, and stone weathered.	
9.2	Walls	Fair - Exposed brickwork, plant growth, cracks and seepage.	
9.3	Floor	Poor - Cracks at certain places, exposed reinforcement, seepage and totally damaged and dilapidated servant's quarter area.	
9.4	Stairs	Fair - Main staircase is in fair condition, only some treads were loose and needs polishing, but spiral staircase is corroded and not maintained.	
9.5	Openings	Poor - Window transformed, opening pattern changed, verandah enclosed, addition of grills, painted wooden frames, closed ventilators, addition of awnings, AC units.	
9.6	Roofing	Fair - Eaves board and wooden members need maintenance, rest not visible.	
9.7	Articulation & Finishes	Poor - Plant growth, all features blackened due to dust accumulation, cornice band broken, plaster and paint peeling off, wooden railing of parapet is broken and patch work of plaster is seen.	
9.8	Services	Poor - All plumbing pipes have leakage; pipes are broken, have moss growth and are totally neglected and in unhygienic condition.	
9.9	Out Buildings	•	
9.10	Overall Conditions	Fair. Maintenance level: Poor.	
10.0	Form	Transformation	
	Structure	Reconstructed verandah by replacing wooden members by I – section, cantilevered verandah is supported on I – section column.	
	Articulation & Finishes	Advertising hoarding on articulation

5.0		Significance & Value Classification
5.1	Townscape (manmade)	Corner plot with two symmetrical buildings placed side by side slightly setback from the
		road front with narrow open spaces on all sides. Access is from the west side and also from
		abutting north road. Building is characterized by verandah fronts.
5.2	Architectural Description	Planning:
		Rectangular plan with narrow front and longer sides with central staircase cutting the plan
		into symmetrical front and rear wings accommodating two similar apartments. The building
		being just ground and four floors seems high due to large floor heights and in the process
		also accommodates intermediate floor in the rear long side. The residential units are
		accessed through a staircase landing into open verandah fronts stretching on two sides
		providing circulation within the house. Principal living and bedrooms are arranged along this
		veranda whereas kitchen, guest room and toilets are to the other side connected to the
		servant's wing, having smaller heights accommodating intermediate levels. Separate
		access to the servant's wing through narrow spiral stair accessing all the G + 7 levels. Both
		the buildings are just a mirror image along the central open space with servant's side facing
		each other.
		Features:
		Projecting Wooden verandahs to the two main facades with trellis and parapet features
		supported on decorative steel brackets. Front ground floor has stone relief frieze band,
		column capital. Brick faced façade is marked by cornice bands, framed windows and brick
		arch openings marking entrance and staircase.
		Style:
		Colonial and Vernacular style features.
5.3	Intrinsic	-
5.4	Value Classification	A(arc), B(per), E, G(grp), F Recommended grade II B
6.0		Topography
6.1	Floors	G + 4 and G + 7 intermediate levels in servant's wing.
7.0		Construction
7.1	Plinth	High plinth height about 1.2 M except in servant's wing where it is 0.3 m high; dressed in
	-	grey basalt stone cyclopean course.
7.2	Walls	Brick masonry load bearing walls and wooden supporting members.
7.3	Floor	Wooden floorboards supported on wooden rafter and beam members.

Sandhurst I	House and Reay House	185(f)	
7.4	Stairs	Main stair is regular double flight wooden staircase with wooden balusters and handrail	
		Servant's wing has narrow spiral steep stair supported on central wooden post.	
7.5	Openings	All door/window openings are rectangular openings.	
		The windows have ventilators above with wooden frame, double leaf-glazed.	
7.6	Roofing	Sloping Mangalore tile roof over wooden boards with overhangs on the two symmetrica wings and central staircase concrete slab.	
7.7	Articulation	Relief features at front ground floor, brick arch openings, wooden trellis in verandas.	
7.8	Finishes	Brick faced external wall finishes with painted arch and lintel bands. Plaster painted internative wall surfaces. Ceramic and altered floor finishes observed.	
7.9	Interiors (Movable & Immovable)	Movable -	
		Immovable -	
7.10	Compound/ Fence/ Gate	Low compound wall on three sides	
7.11	Curtilage/ Unbuilt space/ Out Buildings/ Landscape	Underground water tank and pump room in the central open space between the two wings Trees and plants seen in front and side open spaces.	
8.0		Services & Utilities	
8.1	Lighting	Adequate natural light; also relies on artificial means.	
8.2	Ventilation	Adequate natural ventilation, also relies on artificial means.	
8.3	Electricity	BEST

		Additional Notes: His Excellency the Honorable William Baron Sandhurst, Governor of Bombay laid foundation stone on 27 January 1889 for Anglo Indian Association Building as mentioned in the marble tablet at the building entrance. The Bombay Port Trust reclaimed several acres of land at Colaba and Apollo Bunde during 1873 to 1903 to provide spacious and valuable residential estates. It evolved as a planned residential scheme. As part of the scheme, shops were set up at the lower floors unified by the mandatory requirement of an Arcade along Merewether road. 8.6	Fire Precaution	-
8.7	Other (HVAC/BMS/Security Systems)	-
9.0		Condition
9.1	Plinth	Several alterations and plumbing interventions have been made to the rear and the side of the plinth. Encroachments, plant growth and water logging were observed to the rear.
9.2	Walls	The walls display many cracks. The brickwork is exposed. Plant growth and dampness is seen in many areas.
9.3	Floor	Cracks can be seen in the floors and reinforcement has been exposed. Dampness can be seen in a few places.
9.4	Stairs	Some timber floor boards are broken, the finish is poor, balusters are missing and the handrail is loose.
9.5	Openings	The openings have been altered and are damaged. Ventilator panels are missing and glass panes are broken. The louver shutters are damaged and in a poor state.
9.6	Roofing	The roof level is inaccessible but is of no major concern. The wooden roof over the staircase is neglected and relatively decayed. Damp surfaces can be observed from below.
9.7	Articulation & Finishes	The Porbander stone features like the cornice and the openings have blackened and are damaged. The brick facing is severely damaged and there is excessive plant growth on the rear façade. Pan stains can be observed on the lower portion of the front façade, abutting the road.
9.8	Services	The walls tiles and toilets are in poor condition. The plumbing lines need maintenance.
9.9	Out Buildings	-
9.10	Overall Conditions	Poor Maintenance level: Neglected

5.0		Significance & Value Classification
5.1	Townscape (Manmade)	Located on a corner plot at the junction of Walchand Hirachand Marg and Narottam
		Morarji Marg with roads on three sides and tree-lined avenue maintaining similar height &
		features as per urban design regulations laid down for the entire Ballard Estate.
		It is an imposing corner building forming a local landmark.
		Main access is from corner of Narottam Morarji Marg.
5.2	Architectural Description	Planning
		Building is roughly rectangular in plan. Facades are simple symmetrical with verticality
		emphasized. Building is sharing common open spaces with buildings on sides and rear.
		Corner tower rises higher than the rest of the building height.
		Large floor heights without any setback or interception generate an urban scale-volume
		to the building block.
		Features
		Yellow ashlar masonary having massive look and vertical engaged columns having
		rectangular windows in between.
		Rustication is seen at ground floor level in same yellow stone masonary. Simple band at
		first floor level runs continuously forming step out balconies at places.
		Style
		Influence of European Renaissance style of architecture with emphasized verticality.

		complex, forming a part of skyline of the buildings	
		The building is accessed through an extended por	ch from the west side.
5.2	Architectural Description	Planning	
		The building has an oblong plan with an apsidal sa	anctuary of a semi-octagonal form.
		The west side arched entrance porch is extended	out, with a terrace above with stone
		balustrade.	
		The congregational hall comprises of a long nave	
		both sides, a projecting loft for organ and choir on	
		baptistery in the tower-basement. There is a Sacri	
		Overall, a strong influence from Early Gothic style	
		The west side entrance consists of an imposing de	
		containing belfry storey, resolved into an octagona	al form, surmounted by an articulated
		cornice.	
		The side altars and the pulpit are highly ornament	al.
		The nave consists of 5 bays of arches supported of	on square piers amplified by pilasters and
		slender shafts, which carry corbels of statues.	
		Features	
		The main features of the cathedral are the flying b	uttresses and its pinnacles over the nave
		which strengthen the groined vaulted roof built by	arched work supported by stone ribs.
		The walls and the vaulted roof are highly decorate	d with rich paintings and frescos
		representing biblical subjects.	· -
		Building articulation comprises of openings with po	ointed arches, stain glass windows, rose
		windows, flying buttresses, friezes, bands, corner	
		The vaulting is covered with rich and glowing freso	
		Testament subjects, beginning from Gospel side a	
		Style	
		The building derives influence from Neo Gothic st	vle of Architecture

		Additional Notes: Six blocks of the scheme named Badhwar Park after chairman of the Railway Board, Faki Chand Badhwar, were completed by July 1955. While using the land sympathetically in response to the residential neighbourhood adjacent to it, Badhwar Park added an important facility to the Railway – a good housing stock for its officers and made a posting in the otherwise overcrowded Bombay an attraction. <u>References:</u> RAHUL MEHROTRA and SHARADA DWIVEDI (2000) Anchoring A City Line, 1899-1999 The History of the Western Suburban Railway and its Headquarters in Bombay : Eminence Designs Pvt. 		Taj Mahal Hotel was conceived by the Pars		

Taj Mahal Hotel (old wing)	211(c)
	created by Jamsetji with Raosaheb Sitaram Khanderao Vaidya, who had worked as an overseer during the construction of the Sailor's Home. He was subsequently appointed Resident Engineer for Bombay and was responsible for the construction of the Bombay Municipal Corporation building. After Vaidya's death in 1900, W.A. Chambers of the firm Gosling, Chambers, & Fritchley was appointed as Architect. In his Design Jamsetjee moved away from <i>Gothic</i> style in vogue for public buildings to more <i>Indian</i> features. The building reflects an amalgamation of indigenous local sentiments with an imported western concept – that of a grand hotel. Several elements like staircase, onion shaped cupolas, arches, balconies and the use of a variety of local stones are incorporated from public buildings like Victoria Terminus, Municipal headquarters, Western railway headquarters, and Royal Alfred Sailor's home. References: INTACH (1990) <i>Preliminary unedited listing of Unprotected Monuments, Buildings and Structures listed for Conservation</i> . FRANCIS D.K.CHING and VAN NOSTRAND REINHOLD <i>Visual dictionary of Architecture</i> , Division of International Thomson Publishing Inc. Grey stone clad massive stone façade with central dominating dome structure flanked with onion shaped dome towers on sides, with ground floor arched arcade, window openings, projecting balconies, bands

Projecting bay with wooden trellis work, railing, sloping roof

Arcade with arched openings and columns with Corinthian capitals, dentil band, balustrade

Projecting balconies with tapering floral pattern bands, arched openings, jaliwork, balustrade

Corner detail with decorative frieze bands, floral motifs at the springing point

Series of semicircular arched openings with decorative intrados supported on columns with Corinthian capital, floor bands

Window detail with stone ventilator jaliwork, balustrade

Central bay with dome flanked with side bays with smaller domes, arched windows, brackets, bands

Projecting balcony with stone carved balustrade, supported on decorative brackets

Projecting bay windows with sloping chajjas supported on brackets, tapering bands with floral pattern, sill jaliwork etc

Stone decorative jaliwork in floral pattern

Corner detail with curved balcony projection with supporting brackets

gateway and its Plaza. The monument is a singular structure with openings on all four sides, larger ones being the two longer sides. Features Large openings in the form of archways are the most prominent features with intricate st jali along side and above the smaller arched openings. Projecting pier like structure with high base flanking the central arch gradually recede at upper level culminating as stepped shikhara as in a Hindu temple. Projecting chajja like slabs supported on stone curvilinear carved brackets influenced from Gujarati architecture form part of the façade. Style Designed in the Indo-Saracenic style and heavily influenced by the Medieval Architecture Gujarat. 5.3 Intrinsic The Gateway is integrally connected to the landmark event in the political history of India the visit of King George V, the first British Monarch to set foot on Indian soil. The Gateway also witnessed the departure of the last British soldiers from Indian soil aft Independence.	Gateway o	f India			211(d)

	Landscape	The western front is an open plaza and an enclosed landscaped garden with the statue of Chhatrapati Shivaji Maharaj on horse and behind which is a exquisitely carved marble fountain dating back to the British era. To the north is a statue of Swami Vivekanand in landscaped surrounding.	
8.0		Services & Utilities	
	Lighting	Adequate natural light being an open structure. After sunset large electric halogen fittings illuminate the monument externally. Earlier a chandelier with decorative glass suspended from the central dome.	
8.2	Ventilation	Naturally ventilated. No artificial mechanism provided.	
	Electricity	BEST	
	Water Supply	MCGM	
	Drainage (Plumbing & Sanitation)	MCGM	
	Fire Precaution Other (HVAC/BMS/Security Systems)	Relies on the firefighting department. Police <i>chowky</i> near the western access is responsible for the security of the monument.	
		Opendition	
9.0 9.1	Plinth	Condition	
9.2	Floor	Fair - No evident damage. Presence of plant growth and weathering affect the stone course Fair - Plant growth and weathering action observed at many instances along the external and internal side; affect the strength of the stone courses as well as their surface appearance. Fair - Floor finish within the monument is in the process of being replaced with kotah stone.	
		The original stone pavement around the monument still intact, smooth due to heavy usage, only slight damage in leveling and finishing.	
	Stairs	Indeterminable - The narrow pier enclosed staircases are in a neglected state lacking maintenance.	
	Openings	Fair except sandstone <i>jali</i> at certain places is damaged and replaced with artificial jali.	
	Roofing	Fair except Circular dome has exposed reinforcement steel at some place along with rainwater seepage, and surface deterioration for lack of maintenance.	
	Articulation & Finishes	Poor - The stone finish seems uneven and blackish in appearance as a result of exposure to seawater and ficus growth. The stone jali seems to lose intricacy due to lack of maintenance.	
	Services	Insensitive electrical wiring along the surface of the monument	
9.9	Out Buildings	Meteorological observatory to the northern side is in a fair state, the toilet block towards the western approach resembling the monument is a bad example as well as lacking maintenance.	
		Fair but lacks maintenance. Maintenance level: Poor.	

Gateway o	or incla	211(
10.0		Transformation
	Form	There is no significant transformation to the monument itself, but the fencing around seen unnatural, blocking the monument as such from public access
	Structure	No structural transformation to the monument as observed.
	Articulation & Finishes	Some repair work involving the coating the stone surface with a synthetic resin to render the structure waterproof has led the outermost layer of masonry 'peeling off' being detrimental over a span of time. Also sandstone <i>jali</i> is replaced with artificial <i>jali</i> at few places.
11.0		DP Remarks/ Perceived Threats
		Recreation Ground
12.0		Additional Notes/ References/ Documents available
		Additional Notes: Alternative Designs were prepared and displayed for Public criticism reflecting the Participatory approach towards the Design of a Public monument. The Gateway has RC0 pile foundations, driven almost 36 ft. deep. The reinforced concrete dome construction were proneering in terms of technique at that time. 4.2	Past	Religious	
4.3	Usage	Daily	
5.0 5.1	Townscape (Manmade)	Significance & Value Classification This elaborate two storied structure is located on a corner plot accessed Perin Nariman Street with rear access from Mody Lane. The intricately designed façade of the Agiary falls short of an appreciable space as it directly abuts the narrow Perin Nariman street without the setback or front open space. The Agiary encloses an inward looking court with built from along three sides. Presently the Agiary is surrounded by dense, commercial development of disharmonious scale and character except for the clock tower structure in its vicinity, which compliments the Agiary structure.	
5.2	Architectural Description	Planing and Features The Agiary is two storied, composite structure with gabled Mangalore tiled roof. The front façade is intricately detailed with a composition of Assyrian, Greek and Roman elements in addition to lamuses, Persepolitan column capital, emphasized arched openings cornices entablatures and pediment. The rear facade has a domestic (house like) scale covered by a sloping roof. The structure accommodates an introvert open court, flanked by two storied structures to its left with a small rear open space with rear access. The intricacies of the structure are not only limited to the exteriors but also in the interiors with elaborately designed roof ceiling with unique articulation and detailing. Ablution Pavilion (Kasti enclosure): There is no exclusive kasti pavilion. The provision for the same is made along a partly covered passage along rear open courtyard, accommodating the well. The location of the ablution pavilion is peculiar, as one has to pass the Prayer Hall and Kebla to approach the same. Kebla: The entry to the Kebla from the west is exquisitely detailed marble doorframe, marble shutters and brass hardware. The brass-piped, four shuttered wicket gate to the Kebla is one of its kinds. The Kebla has German silver "afarghanyu" (fire) vessel. In the centre surmounted by a German silver tray holding the fire. The urn rests upon a stone pedestal "idhora", which is exquisitely covered out. The internal walls of Kebla areadomed with swords while large bells hang from the	

Seth Mane	ckjee Navrojee Seth Agiary	212
		ceiling on the two opposite sides. A German silver "chatter" is suspended over the fire. The flooring is finished with marble and is laid with pavis. There are in-built cupboards along the rear wall of the Kebla enclosure. <u>Prayer Hall:</u> It is not formally demarcated as a separate room/ hall, but is about eight feet wide space
		that affronts three sides of Kebla. The Prayer space is well lit and ventilated from rear court. The area is accessed from the ceremony hall as well as from the rear court.
		Ceremony Hall:
		The large Ceremony Hall is grand and detailed measuring about twenty five feet deep and forty five feet long, has marble flooring with elaborate detailing along the walls with arched openings pilasters, heavy cornices, coffered ceiling and intricate wood work. Internal posts with elaborate Persepolitian capitals support the timber trabeated structure. Marble plaques in Persian, Avesta, Gujarati and English languages adorn the walls of the ceremony hall. Baj Room: Two elongated Baj rooms from a part of the rear structure and overlook the courtyard
		thereby drawing light and ventilation from the same. The Baj Room has dressed basalt stone flooring with pavis laid and single stone carved "idhoras" occupy every cubicle. The load bearing walls with paneled window openings along one surface while the ceiling is elaborately carved out and oil-painted. Congregation Hall:
		There are two Congregation halls, one above the entire length of the two Baj Rooms, while the other over the ceremony hall on either side of the courtyard drawing light and cross ventilation. A gable ended, circular chord teakwood trussed, Manglore tiled roof encloses the Congregation halls. Adequate light and ventilation is achieved through the arched openings from all four sides long with the small, open to sky terraces. Residence for Preist's (Boiwala's) in serving:
		Not provided in the premises <u>Curtilege Structures (Wells etc):</u> Small curtilege structures for storage are located on the rear side of the plot. They are poorly maintained. The well is accommodated along the central court and is lined with dressed basalt stone flooring Style No particular style is observed. Adaptations of Assyrian features on façade.
5.3	Intrinsic	External façade detailing by way of emphasized arch openings, extensive stucco work, life size lames, Persepolitan columns, articulate projecting balcconettes, deep cornices at floor roof and openings pediment with pronounced entablature topped with a finial shaped as an afarghanyu. The interiors of the Ceremony Hall are well articulated by means of Persepolitan capital columns, carved coffered ceiling, extensive stucco work along the walls by way of cornices pilasters, motifs and arched openings along interiors with elaborate circular chord timber trussed roof for congregation hall, other than intricate detailing for openings, for openings in built furniture, accessories by way of photo frames, plaques, clocks, etc.

5.1	Townscape (Manmade)	The fountain is located at the junction of Pherozshah Mehta Road and Perin Nariman			
		Street.			
		It serves as a visual marker at the termination of Perin Nariman Street.			
5.2	Architectural Description	Planning			
		The fountain has a cruciform plan. It has entrances from all four arms surmounted by a			
		clock tower and the symbol of fire. The central clock tower rises above the rest of the			
		structure.			
		It has central wooden shaft, which might have served as service shaft for the clock at top.			
		The entrance facing Perin Nariman Road has a marble bust of Bomnji Hormusji Wadia.			
		Features			
		Human headed, two winged lions are traditional Zoroastrian royal religious symbols			
		(Lamassu), which guard all the entrances of the fountain.			
		The fountain features at the top, the symbol of fire, held sacred by followers of the Zoroastrian faith.			
		There are floral cornice bands at various levels resting on dentil bands.			
	1	Openings have projecting rectangular moulding around the periphery. Engaged circular and square columns on all facades.			
	1	Style			
	1	Predominant use of Greek-Persepolis style features.			
5.3	Intrinsic	The fountain stands on the land given by the Municipality in exchange for a well, which

		Hospital
12.0		Additional Notes/ References/ Documents available
		Additional Notes: Situated on Prescott Road, the grey stone building with intricately carved stone screens, was designed by Muncherjee Cowasjee Murzban and constructed with funds raised by members of the Parsi community. The hospital was opened in 1887 at the initiative of Dr Temuljee Bhiccajee Nariman, in a small, sea-facing house on the Marine Lines. As the accommodation was found to be limited, a plot was acquired in the Hornby-Ballard Estate <u>References:</u> INTACH (1990) Preliminary unedited listing of Unprotected Monuments, Buildings and Structures listed for Conservation. 5.1	Townscape (Manmade)	Located along a row of buildings on a tree-lined avenue maintaining similar height and features as per urban design regulations laid down for the entire Ballard Estate. The building has central access through a porch with separate entry and exit gates from R. Kamani Marg on eastern side. Part of the first phase of development of this area with the buildings overlooking the eastern waterfront.		
5.2	Architectural Description	Planning The building is rectangular in plan with longer side facing R. Kamani Marg. It is located on a corner plot with roads on three sides and sharing common open spaces with buildings on sides and rear. Large floor heights without any setback or interception generate an urban scale-volume to the building block. All facades being symmetrical in grey undressed regular ashlar masonary with yellow dressed stone accents. Front façade is divided in number of vertical bays with central bay rising higher and side square towers topped with pyramidal sloping roof. Features Front central bay has a projecting porch supported on three lancet arches on columns		
53		with small spires at either corners of the porch. Above a series of distinct arch forms define the bay on upper levels and the top has gable end over three lancet arches. The gable end is crowned by a lion shaped finial. The side elevations have equilateral arched openings in a series. Multi-foil parapets, decorative bands, carved arch springing points, carved spandrels, finials form the important features displayed on the facades. Style Influence of European Renaissance style features.

5.0		Significance & Value Classification		
5.0 5.1	Townscape (manmade)	It is a corner building at the junction of Ramjibhai Kamani Marg and Currimbhoy Road.		
0.1	(maninade)	The main access to the building is from center.		
		It is marked by pediment on top and has common features as of other buildings in Ballard		
		Estate.		
5.2	Architectural Description	Planning		
		The building has a rectangular plan.		
		The building is ground plus three storied high with basement and terrace.		
		Entrance of the building is from Ramjibhai Kamani Marg, from the center, which leads to staircase and lift block. Front has verandahs on both sides behind which offices are		
		located. The toilet block is located in rear.		
		All floors have offices. Basement -J.L. Morrison Ltd., ground - Lionel Edwards Ltd., first -		
		Ameer Trading Co. Ltd., second - District special Auditors and third - Prudential ICICI Asst.		
		Management Co.		
		Features		
		It is a symmetrical building with nine bays with the central one being the staircase shaft.		
		Entry is marked by semicircular arched opening with heavy panel wooden door and colored		
		glass ventilator above. Has continuous balcony at first and third floor levels; part projecting balcony on second floor. They are supported on decorative brackets; terrace is defined by		
		cornice band and parapet wall with pediment, which has festoon and pilasters, over central		
		bay. All the openings in front and side are segmental opening while the rear have		
		rectangular opening.

The Kene:	seth Eliyahoo Synagogue	218	
6.0		Topography	
6.0 6.1	Floors	Topography G+1	
7.0	110013	Construction	
7.1	Plinth	Buff basalt stone plinth marginally varies in height, but overall it's a low plinth approximately of two stone courses.	
7.2	Walls	Walls are thick load bearing brick walls, plastered and painted.	
7.3	Floor	Clay based mosaic tiles have been used for flooring on ground floor and corridors. Wooden planks supported on timber joists support women's gallery.	
7.4	Stairs	The main staircase leading to the prayer hall is a wide single flight wooden staircase with wooden handrail fixed on the wall. A subsidiary wooden doglegged staircase with cast-iron railing and handrail is built to access the women's gallery above.	
7.5	Openings	The synagogue has five external entrance doors. The main entrance door has decorative pediment defining it. The prayer hall has wooden double leaf double shutter folding entrance door. The windows are partly glazed and louvered with hinged ventilators fixed inside the semicircular arches above. The western wall has an exquisite stained glass paneling.	
7.6	Roofing	The Synagogue has gable roof with Mangalore tiles supported on wooden rafters. The ceiling is finished with wooden planks from inside with floral motifs.	
7.7	Articulation	West wall facing west having a full height window fixed with decorative stained glass panels with pediment at the topmost floor. Plain bands are present at each floor level.	
		Window openings having semicircular arches with ventilators and defined by mouldings. Features like decorative brackets, pediment above door openings, ornamental column capitals, cusped arch patterns etc. impart an ornate character to the interior. Intricate <i>jali</i> work in marble is present on either side of the Heckhal. The facade is characterized using grooves, decorative bands various motifs, freezes, corries and cortels.	
7.8	Finishes	cornices and corbels. Externally walls are painted in bright blue and white colour. Internally, the walls are plastered and painted. The prayer hall has Minton tile floor finish and the raised platform for the priest done in marble	
7.9	Interiors (Movable & Immovable)	Movable Special wooden benches in the prayer hall. Original chairs, writing tables, round tables, and cupboards form the loose furniture. Wooden donation boxes are located at entrance to the prayer hall. Immovable Original gas-lights. Original oil lamp in front of Heckal. Two majestic chairs and a wooden alter table form part of the fixed furniture. Mouldings forming an arched pattern on walls on all sides. The fans seem to be old and part of the original furniture. There is a plaque in <i>Hebrew</i> script above Heckal and one on either side in addition to marble plaques fixed on sidewalls of the staircase.	
7.10	Compound/ Fence/ Gate	Since the building abuts the surrounding roads there is no side open space around the building.	
7.11	Curtilage/ Unbuilt space/ Out Buildings/ Landscape	-	
8.0		Services & Utilities	
8.0 8.1	Lighting	Adequate natural light through large windows on northern and southern walls, supplemented by artificial lighting	
8.2	Ventilation	Adequate natural ventilation, supplemented by artificial ventilation	
8.3	Electricity	BEST	
8.4	Water Supply	MCGM	
8.5	Drainage (Plumbing & Sanitation)	MCGM	
8.6	Fire Precaution	-	
8.7	Other (HVAC/BMS/Security Systems)	Manual security	
9.0		Condition	
9.1	Plinth	Fair - plinth height has diminished probably due to laying and relaying the road over the years.	
9.2	Walls	Fair - plaster peeling off from places due to dampness.	
9.3	Floor	Fair - there is an addition of waterproofing layer above it.	
9.4	Stairs	Fair - Wooden planks subjected to wear and tear due to friction over the years.	
9.5	Openings	Fair - grills have been added to eastern side ventilators.	
9.6	Roofing	Fair - peeling of paint due to water seepage. Open terrace in a deteriorating condition.	
9.7	Articulation & Finishes	Fair - original tiles have been replaced by ceramic tiles. Wooden flooring on first floor is deteriorating.

		Additional Notes: The fountain was erected by public subscription around 1865 to commemorate the visits of the Duke of Wellington to Bombay in 1801 and 1804. There are eight bas-reliefs on the pedestal, illustrating the Duke's many victories in battle. Sadly, this fountain, which was one of the earliest to be installed in Bombay, has been painted like other fountains in the city – a 'beautifying' effort that actually damages porous stone with the permeation of synthetic paint through its natural crevices. The parking around the fountain and the double layer of enclosing fencing have also significantly altered the pivotal quality that such monuments exert on traffic intersections. <u>References:</u> INTACH (1990) Preliminary unedited listing of Unprotected Monuments, Buildings and Structures listed for Conservation.
